

WATER CONSERVATION

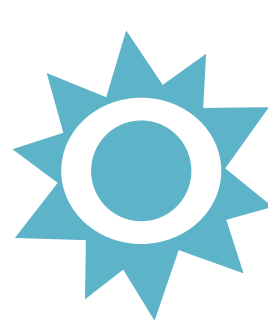

ANADARKO
Corporate Responsibility

+ ANADARKO IS MAKING A POSITIVE DIFFERENCE

CONSERVING

Anadarko installs “Water-on-Demand” systems that use automation to “turn on” the faucet only when we need it. This practice not only reduces the need for impoundments and holding ponds that may waste water, but also reduces truck trips and GHG emissions.

**“WATER-ON-DEMAND”
REDUCES TRAFFIC
AND EMISSIONS**

RECYCLING

In West Texas, we have recycled more than one million barrels of water in the past year by reusing produced water for subsequent well completion.

**1 MILLION
BARRELS
RECYCLED**

INNOVATING

Anadarko assesses all potential sources of water for its operations and evaluates innovative options such as use of brackish water. In Colorado, we use municipal effluent, or waste water, for our drilling and completion activities.

**EFFECTIVE WATER
MANAGEMENT IS
ESSENTIAL FOR ALL**

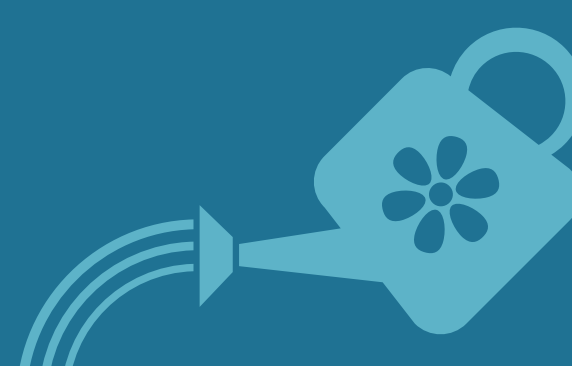

+ YOU CAN MAKE A POSITIVE DIFFERENCE

CONSERVING WATER

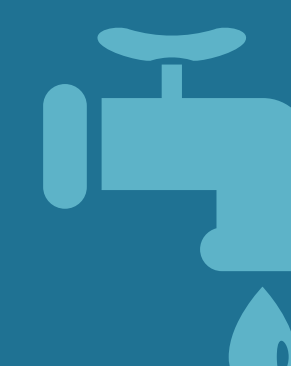

Take shorter showers.
Every minute less saves one
gallon of water.

RECYCLING WATER

Water your home’s landscape with
collected rainwater to help relieve strain
on local municipal water supply.

INNOVATING

Think of ways you can use water
more efficiently to protect the quality
of life now and in the future.
