ANADARKO IS ... PROVIDING FOR TODAY, INNOVATING FOR TOMORROW

Anadarko Petroleum Corporation’s mission is to deliver a competitive and sustainable rate of return to shareholders by exploring for, acquiring and developing oil and natural gas resources vital to the world’s health and welfare. As of year-end 2013, the company had approximately 2.79 billion barrels-equivalent of proved reserves, making it one of the world’s largest independent exploration and production companies.

Anadarko In Mozambique

Since 2010, Anadarko and its partners have drilled more than 25 successful deepwater wells within the Offshore Area 1 Block discovering an estimated 50 to 70+ trillion cubic feet (Tcf) of recoverable natural gas. Additionally, Anadarko and its partners are advancing a commercial liquefied natural gas (LNG) development onshore, with first cargoes planned in 2018.

These massive natural gas discoveries and future world-class LNG project represent a transformational opportunity for Mozambique to become a global exporter of LNG. This activity has the potential to generate substantial revenues for the government, long-term foreign investment, infrastructure improvements, as well as direct and induced-employment opportunities for many years to come.

“We believe, as we go into the next decade, Mozambique will emerge as the third-largest exporter of LNG in the world.”

- Al Walker, Anadarko Chairman, President and CEO
Sustainability
As the Mozambique Liquefied Natural Gas (LNG) project advances, we expect to support and invest in programs that will expand access to health services in local communities, improve educational and training opportunities aimed at building capacity to sustain a strong business environment, while taking great care to protect Mozambique’s natural environment.

The project supports the recruitment, training, and career progression of Mozambican citizens in the workforce, and the development of Mozambican-owned suppliers and service providers as part of the project’s supply chain.

Above all, Anadarko aims to develop a world-class LNG project that directly benefits the people of Mozambique, act as a good neighbor and contribute a new source of cleaner energy for the world.

Niassa Lion Project
Anadarko has partnered with the Niassa Lion Project, an innovative conservation effort working directly with the inhabitants of the Reserve on culturally appropriate, locally derived and empowering solutions to promote co-existence of local people and the iconic African lion.

Partners for Pediatric Progress
As part of the focus of improving healthcare in Mozambique, Anadarko established a partnership with Partners for Pediatric Progress (PPP) in 2012 in support of the valuable change that they are bringing to the landscape of pediatric care. Anadarko’s support enabled PPP to hire a full-time physician based in Mozambique, as well as introduce pediatric training to the district of Palma in the northernmost province of Cabo Delgado.

Afungi Training Program
To meet Anadarko’s immediate need for qualified and trained individuals to assist in the construction of the LNG project and associated activities, as well as prepare the local community for employment opportunities, Anadarko established a training center on the Afungi peninsula in Palma district, the future location of the LNG park. Adult trainees from the local communities receive training on health, safety, and essential workplace skills in a program called “Work Well, Live Well.”

Platts Global Energy Award
Anadarko’s Mozambique project was the winner of the 2013 Platts Global Energy Award in the Industry Leadership, Exploration and Production category.
