

Central Oil Stabilization Facility FACT SHEET

Our Mission

Anadarko Petroleum Corporation's mission is to deliver a competitive and sustainable rate of return to shareholders by exploring for, acquiring and developing oil and natural gas resources vital to the world's health and welfare. As of year-end 2017, the company had approximately 1.44 billion barrels-equivalent of proved reserves, making it one of the world's largest independent oil and natural gas exploration and production companies.

Anadarko in Colorado

Operating in the DJ Basin for more than 30 years, we are among the largest producers of oil and natural gas in Colorado. Our employees live in more than 80 communities along Colorado's Front Range, and we recognize the importance of working collaboratively with landowners, regulatory agencies and government officials throughout the state. We are proud to be a part of the strong energy industry in Colorado, as we strive to safely produce the oil and natural gas resources that support the state's economy and Coloradans' way of life.

Enhancing Safety, Reducing Emissions & Increasing Operational Excellence in the DJ Basin

Anadarko is committed to continuously investing in and implementing new technology that makes our operations safer, more efficient and more compatible with neighboring communities. From its Wattenberg field operations, primarily located in Weld County, Anadarko safely produces enough energy to meet the daily needs of more than 5 million American homes.

Central Oil Stabilization Facility (COSF) Facts

- Stabilizes field oil received through an oil-gathering system pipeline, eliminating the need for stabilization equipment at individual well sites. This reduces emissions, noise, truck traffic and shrinks the overall footprint of producing well sites.
- Increases the compatibility of our operations in a variety of ways including:
 - Increases public safety
 - Increases efficiency of operations
 - Reduces emissions by:
 - Keeping our product in the pipe for sales
 - Separating flash gas and natural gas liquids (NGL) from the oil in a central location
 - Pumping crude oil into oil sales pipeline systems, reducing the amount of truck traffic
- 125,000 barrels per day of processing capacity
- Houses two, 250,000-barrel oil tanks
- Feeds existing natural gas, NGL, and oil pipelines
- Increases operational excellence and reduces long-term construction costs
