

# Wyoming

FACT SHEET

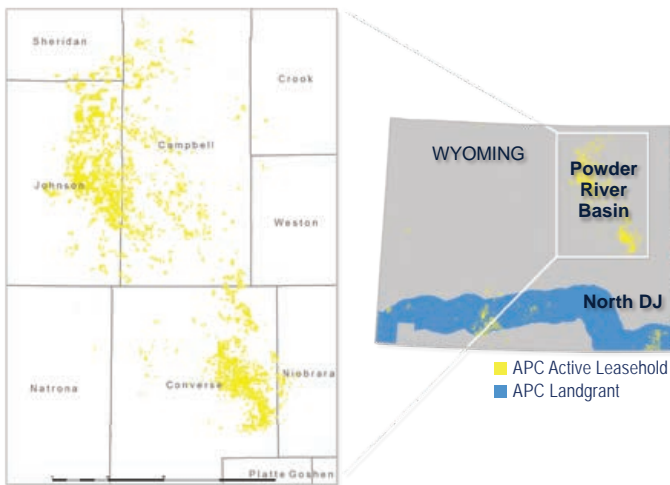

## Our Mission

Anadarko Petroleum Corporation’s mission is to deliver a competitive and sustainable rate of return to shareholders by exploring for, acquiring and developing oil and natural gas resources vital to the world’s health and welfare. As of year-end 2017, the company had approximately 1.44 billion barrels-equivalent of proved reserves, making it one of the world’s largest independent oil and natural gas exploration and production companies.

## Anadarko In Wyoming

We are among the largest landowners and mineral leaseholders in Wyoming. Additionally, we hold significant mineral-ownership positions along the historic Union Pacific Railroad Land Grant. We are committed to a collaborative approach with key stakeholders and regulatory agencies to safely and responsibly develop energy resources vital to Wyoming’s economy and America’s energy security, health and welfare.

## Anadarko Key Statistics

	<p>Owns <b>4.2 million acres</b> of minerals, making it the largest private mineral owner in Wyoming</p>		<p>Invested more than <b>\$4 billion</b> in capital since 2007</p>
	<p>Employs a highly skilled workforce of <b>160 people</b> across our offices in Wyoming including Gillette, Casper, Douglas and Rock Springs</p>		<p>Paid more than <b>\$1.6 billion</b> in taxes, salaries and royalties (2012-2017)</p>

## Renewable Energy

Anadarko owns interests in several wind farms, as well as other mineral properties, through non-operated joint ventures and royalty arrangements located within, and adjacent to, our Land Grant acreage.

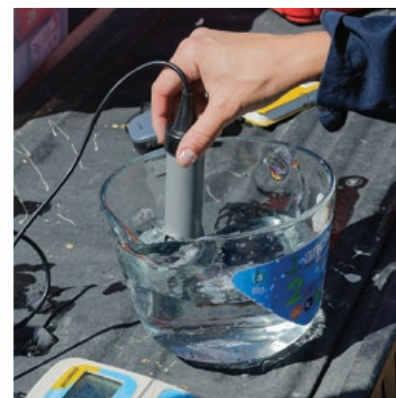

## Protecting Wyoming's Natural Resources

We are continuously developing new ways to provide energy in a manner that preserves and protects Wyoming's unique environment, habitats and history. These efforts have earned numerous Reclamation & Wildlife Stewardship Awards from the Wyoming Game & Fish Department. Projects include efforts to monitor elk and sage grouse populations, mule deer migration patterns, and the construction of a 48-mile water pipeline to conserve and store water. We were previously honored by the University of Wyoming's College of Agriculture as the Research and Outreach Partner of the Year for improved reclamation practices and Greater Sage Grouse research.

### Recent Conservation Projects

- Enhancing elk and sage grouse habitats through sponsorship of biological studies, monitoring programs, seeding and reclamation efforts
- Reseeding thousands of acres to prevent invasive species and restore production areas
- Funding the Greater Sage Grouse Advanced Mitigation study to see how science-supported mitigation can result in measurable impact reductions to the sage grouse and its habitat
- Sampling and statistical research related to historic produced-water reservoirs in the Belle Fourche Drainage
- Coordinated with the Wyoming Department of Environmental Quality Abandoned Mine Lands to reclaim five abandoned mines

## Anadarko Cares

Since 2008, we have donated nearly \$5 million to Wyoming nonprofit groups. Additionally, our employees are some of the largest contributors to the United Way in Wyoming. Recognizing the importance of Wyoming's only four-year university, we partnered with the University of Wyoming to recruit qualified graduates and to support academic and athletic programs. We have contributed nearly \$2 million to the university – matched dollar-for-dollar by the State of Wyoming – to further energy research and benefit the state's workforce.
